

I am a current subscriber to satellite radio. I have chosen to pay for my radio service for a number of reasons, one of which is my ability to select what I want to hear and when I want to hear it. I can choose when I want to hear the weather report, traffic report, or any one of the other stations that satellite offers. It is direct and to the point. More importantly, I have a control that Am and Fm cannot give me. I would want satellite radio to carry all of the local programming they can. I believe that Satellite would do a much better job at it than Am or Fm has. I wouldn't have to listen to countless commercials or a bunch of DJs sitting around laughing at themselves before I get any usable information. Am and Fm saturate their air time with junk from advertisers, that interfere with what I need from radio. Satellite radio is a premium purchased service. I don't believe that the National Association of Broadcasters should have any influence on what Satellite sends to it's customers. I urge you to reject 04-160.
